

## REDUCE RISK WITH PLANNED RESPONSES TO CYBERSECURITY EVENTS

---

Today's threat landscape is evolving at an unprecedented rate because threat actors have become agile, well-financed, and motivated to target organizations of all sizes. These cybercriminals have found new ways to evade law enforcement using the Deep and Dark Web to monetize stolen information. In response to this increase in criminal activity, organizations are ramping up their cybersecurity protections.

Despite increased efforts and investments in defense tools, no organization is immune from a breach. What you do when this security incident occurs can have serious repercussions for both your organization and your customers.

## PREPARE FOR THE UNPREDICTABLE

---

The threat landscape is ever-changing and the tools threat actors are employing to breach your organization are also evolving. Due to the complexity of most security environments, resource-constrained IT professionals have to focus on emerging priorities and often can't afford the time, or allocate the resources, to develop an incident response plan.

## PLAN FOR THE FUTURE

---

While no organization wants to believe they are susceptible to security incidents, the reality is that an incident will occur and you have to be prepared with a robust, relevant and right-sized solution for responding.

Time is a crucial factor for reducing the impact of a security incident. Unfortunately, most internal incident response teams are already multi-tasking and many organizations don't have the resources to support this function. When time is consumed by business operations, it's crucial for your organization to have a plan for responding to incidents.

## STREAMLINE YOUR RESPONSE

---

BlueVoyant's Incident Response Plans come into play the minute you have identified suspicious or malicious cyber activity that could impact your business through:

- **Disruption of information systems, networks or digital services**
- **Manipulation and/or destruction of information and infrastructure**
- **Unauthorized access to infrastructure and sensitive data**

The plan will help streamline the response your team makes to classify events based on overall impact to the organization.

## HOW WE WORK

---

BlueVoyant will create a plan that is flexibly built to address multiple breach types and severities. We will help you to identify personnel needed based on the unique threat incidents possible. We will define and outline breach responses based on the event (internal/external threat actor, PII or proprietary data theft). We will provide a tailored checklist of prioritized action items and help you to audit legal obligations of your organization and assess third-party compliance.

Your plan will include ways to:

- **Determine scale of impact and escalation protocol**
- **Assign roles and responsibilities post notification**
- **Communicate internally when responding to the incident**

## BENEFITS TO BUILDING A PLAN

---

By engaging BlueVoyant, you are choosing to incorporate industry-recognized best practices that will be tailored to your specific organization. You will be able to accelerate your response to cybersecurity events, gain insight into current organizational vulnerabilities, and plan for engaging additional support. BlueVoyant provides plans that give you confidence that you are well-prepared to engage in immediate, effective remediation and eradication responses.

## BLUEVOYANT ADVANTAGE

---

The services of BlueVoyant's Threat Intelligence, Managed Security Services and Professional Services are mutually reinforced. Our proprietary, global cyber threat data set provides threat intelligence unparalleled to our contemporaries.

As a BlueVoyant client, you can amplify your cybersecurity by engaging our team for additional services, such as:

- **Incident Response:** BlueVoyant Incident Response Team and SOCs are available for increased insights and incident investigation and reporting
- **Managed Security Services:** From endpoint and vulnerability awareness to a complete robust technology suite to address evolving threats, MSS solutions address a variety of common cybersecurity challenges
- **Threat Hunting:** BlueVoyant's team of experts provide human and machine-learning to execute threat hunting

## ABOUT US

---

A first-things-first cybersecurity company focused on delivering best-of-breed technology and outstanding customer service to businesses around the world. We believe in the democratization of cybersecurity - offering robust solutions and tools to businesses previously ignored and underserved. Through our advanced Threat Intelligence, Managed Security Services, and Professional Services, we excel in intelligence gathering, cybersecurity defense, and detection of attacks with response coupled with remediation. With global SOCs, we are prepared to protect the world over from well-financed threat actors and their newest tools of attack.
