

basecase

Platform Security & Privacy

Safety ensured.

We score an A+ security rating on Qualys SSL Labs testing.

Basecase is a single sign-on system that encrypts every user file with a 4,096-bit key. It would take over 1,000 years to crack one key.

As a result, our platform has a 100% security score on certificates, protocol support, key exchange, and cipher strength.

Our security is powered by three driving factors.

Multi-tenant

Every client has its own, physically separate server for data storage.

Domestic

Data is stored on the IBM Cloud servers in Toronto. They have never had a breach.

Controlled

There is no third party running the system, so data is never shared.

Active consent.

Our form configuration ensures compliance with PIPA and HIPAA.

On every Basecase form, the user must give permission for its employer to view their finished submission.

By gathering explicit and regular consent, the employer maintains full legal access to the personal information used in our reporting.
