

Flight information wherever your travellers need it

Responsive content automatically adjusts to browser size

Deliver compelling real-time flight info travellers can act on

Enable travellers & staff to plan around flight delays or cancellations

Multilingual capabilities

## Actionable flight status information & real-time maps

- **Flight Tracker** – Track in-air flights in real-time on your web and mobile sites by flight number or route. Results include scheduled and actual times, terminals and gates and a map showing flight's current position
- **Arrival & Departure FIDS** – Flight board of arrivals and departures including current status and times at a specific airport
- **Airport Delay Map** – On-time and delay status for current arrivals and departures at airports around North America
- **Air Traffic Map** – Flights arriving at and departing from an airport with the option to display detailed flight information such as departure & destination airports and scheduled & updated ETAs

“Putting information in our customers' hands to give them the power to control their own travel experience with a technology-based solution was logical”

Jonathan Dean, Maryland Aviation Administration (BWI) Manager of Communications
