

Hospital Electronic Measures

Solution Overview

The ENCOR software gathers data from your EHR to seamlessly capture eQMs. It is an industry leading, ONC-certified application designed to assist you in successfully meeting eQm reporting requirements for the CMS and The Joint Commission quality reporting programs.

"We are proud of our partnership with Medisolv which helped us to achieve recognition from The Joint Commission as a pioneer in eQMs nationwide. We struggled to implement eQMs with previous vendors, but Medisolv's electronic measures software combined with their support team made it easy for us to implement and improve our eQm performance."

L. Dale Harvey, MS, RN, Director, Performance Improvement
Virginia Community University Health System (VCUHS)

KEY FEATURES

Capture

- All hospital eQMs for CMS and The Joint Commission are fully supported
- eQm data is refreshed daily for timely visibility into measure performance
- Data extraction and normalization from multiple EHRs
- Timely annual updates of eQm specifications

Monitor

- Drill down to patient, practice and provider-level details
- Enhance your understanding of the measure logic with our innovative visualizer tool
- Use the dashboards to centralize quality measures and provide insights for hospital improvement
- Compare performance against internal goals and national benchmarks

Validate

- Assistance in testing and validating of data to ensure accuracy
- Data capture workflow optimization
- On-demand and live regulatory education and guidance

Submit

- Proactive management of submission deadlines
- Full submission services to CMS and The Joint Commission
- Assistance in resolving rejections
- Submission data snapshots for use in case of future audits
- Post submission audit assistance

2012

Medisolv has been submitting electronic quality data since the pilot programs began in 2012.

Zero

No Medisolv hospitals or providers have received a CMS penalty for failure to successfully report in any year.

15+

The average number of years Medisolv clinical experts have worked in a hospital setting.
