

6 Ways to Increase Inventory Control

Maximize ASRS with integrated inventory management software

#1 Receiving

Avoid

repetitive and potentially error-prone data entry.

Reduce

search time through faster and easier accessibility.

Reslot

products automatically to accommodate changes in inventory.

Achieve

better organization by monitoring the status of every item and organizing stored products by a multitude of criteria.

☆ added BONUS

#2 Pick accuracy

Validation equipment

can be integrated with ASRS to ensure the right item is picked every time.

Barcode scanning

to verify the correct item is picked, ensuring accuracy.

Indicator lights

Illuminates the item's location for improved accuracy.

Item protection

due to fully enclosed ASRS keeping stored items clean and protected.

☆ added BONUS

#3 Track-and-trace

The software maintains a record of

Item

Date

Operator

Order

Theft prevention

ASRS can be secured, requiring a software-traceable personal login before operation. This allows missing or misplaced goods to be traced back to an individual.

☆ added BONUS

#4 Replenishment

ASRS inventory management software keeps track of every item. It can be programmed to send an alert when an item is approaching out-of-stock, triggering a call for replenishment.

Keep extra inventory on hand to avoid supply chain disruptions.

☆ added BONUS

#5 Inventory turn

With integrated inventory management software, an ASRS ensures items are picked to optimize inventory turn. This ensures a product is used well before its expiration date.

Determine picking standards to facilitate FIFO or LIFO picking.

☆ added BONUS

#6 Cycle counting

ASRS track every item stored within the unit. Managers can closely monitor stock levels in real time and potentially reduce the amount of inventory they must store.

Eliminate inventory counts with accurate inventory data.
