

# Automation and Intelligence for Every Alarm

Addressing automatic tank gauge (ATG) alarms is a fulltime job. False positives triggered by routine service or site-specific conditions make this effort increasingly cumbersome and time consuming, especially when monitoring multiple sites. Titan Cloud's Alarm AI advanced software workflow removes this burden by processing every alarm and responding appropriately, day and night.

Alarm AI changes everything by greatly minimizing fuel and environmental risks. Simply set the system to your protocols, and it will address your priority alarms accordingly.

## With alarm AI, you can:

**Automate your Workflow** – Eliminate expensive, manual processes

**Stay Focused** – Let the system identify false positives so you can focus on the ones that really need attention

**Design to your Needs** – Customize the solution to meet your site's unique needs.

## Benefits

**Eliminate False Positives** – Smart protocols allow Alarm AI to pause and reassess an alarm to see if conditions have cleared prior to escalating it to your vendor.

**Minimize hands-on time** – 24/7 monitoring eliminates the need for email alarm response and after-hours call center support by responding to alarms exactly as you need.

**Customize for your unique needs** – Site-specific protocols established by you improve response time and accuracy while decreasing costs associated with unnecessary response.

**Enjoy complete compatibility** – Alarm AI is designed to work seamlessly with all ATGs and can be programmed to communicate with your current vendors.

**To learn more about how Alarm AI can ease monitoring at every site, call us today at 615-372-6000 or visit [titancloud.com](http://titancloud.com) to schedule your free demo.**
