

HOW WE CAN HELP

While psychological assessments can sound intimidating, these tests can help you, as a parent, understand the nature of problematic behaviours.

Having an experienced psychologist to administer them will help identify the problem accurately.

At OT&P MindWorX, we offer four types of assessments to identify your child's personality traits and abilities:

- IQ
- Behavioural
- Reading
- Psychoeducational

After the assessment is completed, recommendations and a solution-based approach are given to assist parents in achieving the best outcomes for their child.

Assessments for Children

PSYCH-ED

Our full comprehensive psychoeducational assessment assesses academic domains as well as social and behavioural aspects of schooling by taking a school neuropsychological approach. It will provide insight into your child's current level of abilities and how those specific abilities influence their functioning.

These abilities may manifest within a classroom setting, across all subjects and manners of schooling. The report details performances across a wide range of co-normed and evidenced-based assessments.

To ensure a fair and well-rounded understanding of your child, interviews with parents, teachers and the child will be conducted before a school observation. This is then followed by two days of 3-hour evaluation sessions.

School Neuropsychological Domains Measured:

- Attention
- Sensory-Motor
- Speed & Efficiency
- Processing Speed
- Visual-Spatial
- Auditory-Visual
- Memory & Learning
- Executive Functioning
- Language

Academic Domains Measured:

- Reading
- Oral Language
- Writing
- Maths
- IQ

Social and Behavioural Skills Measured

- Attention
- Motivation
- Persistence
- Focus

Test used: BASC, Conners, KTEA-3, Dyslexia Screening Kit, WIAT, WRIT, RIAS-2, BERRY VMI, Lucid ViSS, TOMAL-2

IQ ASSESSMENT

The assessment evaluates a range of cognitive domains and specific abilities within both a verbal and visual scale. It uses a standardised, reliable test to assess intelligence and is able to identify learning disabilities and giftedness, as well as neuropsychological impairments.

Test used: WRIT, RIAS-2

READING SKILLS

Our in-depth reading skills assessments focus on a child's abilities within the domain of reading. Including phonetic decoding, blending of sounds, word recognition, rapid word reading and reading comprehension.

It also assesses for visual stress which occurs in 15 - 20% of the population and may impact a child's literacy development.

This assessment will benefit children who are struggling with reading at their year level.

Specific Academic Domains Covered:

- Letter and Word Recognition
- Reading Comprehension
- Sound-Symbol Association
- Decoding skills
- Reading Fluency & Understanding

Social and Behavioural Aspects of Reading Covered:

- Visual Stress
- Motivation
- Confidence
- Persistence

Test used: KTEA-3, WIATT, WRIT, Lucid ViSS

BEHAVIOURAL

This assessment is best for children who may be exhibiting different or atypical behaviours both at home and at school -- such as tantrums, aggression and difficulties with independence.

It may also indirectly assess a child's self-help skills and social abilities.

Test used: BASC, Informal 1-on-1 with therapist
