

Eviti® Advisor—Evidence-Based Treatment Intelligence for Improved Outcomes in Oncology

Real-Time Access to Actionable Information Leads to Fast, Informed Decision-Making at the Point of Care

Physicians struggle to manage overwhelming amounts of information around the risks, benefits, and trade-offs of cancer treatments and therapies that originate from consistently evolving cancer research. Among a multitude of treatments and, at times, antiquated information, providers must drastically narrow down the field, quickly and effectively.

Eviti Advisor empowers clinicians to make personalized treatment decisions at the point of care, using the most comprehensive, unbiased oncology decision-support resource available.

ACCREDITED

ONE COMPREHENSIVE RESOURCE

By compiling treatments derived from peer-reviewed literature, oncology associations and government agencies, Eviti Advisor allows clinicians to view:

- All cancers and cancer subtypes
- 5,000+ evidence-based treatment regimens
- 10,000+ federally-registered clinical trials
- Level of evidence, expected clinical outcomes, treatment costs, toxicities and supporting literature
- Chemotherapy, radiation therapy and supportive drugs

Eviti Advisor integrates with Eviti Connect, the pre-authorization path of Eviti that:

- Filters regimen options by payer plan language
- Aligns the interests of the provider, patient and payer before treatment begins
- Offers expert, peer-to-peer interactions with the Eviti medical office
- Identifies and addresses conflicts with payers before treatment begins

UNCONFLICTED & TRANSPARENT

Eviti has no financial interest in the drugs for regimens that are displayed as treatment options. They are filtered and displayed solely on the criteria entered by the clinician.

The Eviti clinical library is maintained and kept current by:

- A full-time team of oncologists and oncology certified nurses
- Clinical informatics professionals

ACCESSIBLE & EASY TO USE

Eviti Advisor is a web-based application that does not require installation or maintenance by physicians or practice staff.

- All updates are provided automatically by Eviti's servers, without any additional work for the clinician
- The program's intuitive user interface is easy to learn and quick to use
- Clinicians simply begin a search by selecting a cancer type, and treatment options are displayed
- Filters can be added to narrow results and compare treatment options side by side
