

Eviti Connect[®] for Oncology

Align Quality Oncology Care with Appropriate Reimbursement

Payers and providers spend a substantial amount of time and resources managing authorizations for oncology treatments. In fact, authorizations are among the most manual and costly administrative transactions for both payers and providers. Medical guidelines for oncology treatments are complex, non-standard, and quickly compound across health plans.

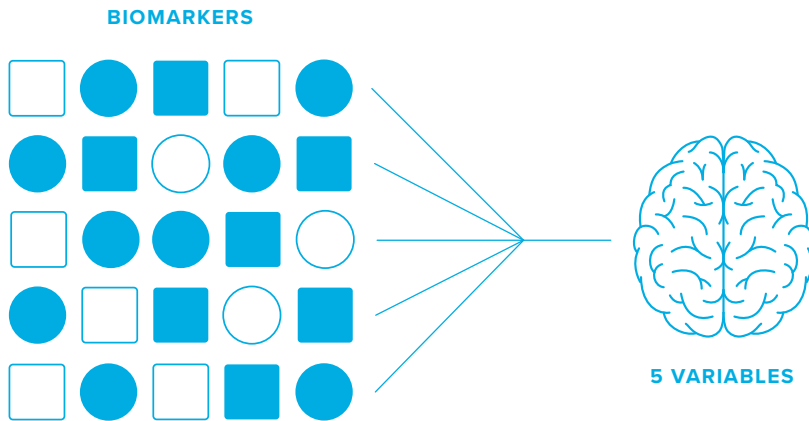

THE SOLUTION

Eviti Connect is a web-based application that electronically connects health plans and oncology practices for the authorization of oncology treatments in real-time.

- Reduces the administrative time involved in obtaining authorizations at the drug level
- Assures appropriate reimbursement at the regimen level
- Validates cancer treatment options
- Aligns all parties around value-based oncological care

KEY FEATURES

- Health plans provide the ability to create and submit an authorization electronically, enabling intelligent treatment plan review and selection and ensuring cost-effective care and appropriate reimbursement.
- Health plans can integrate medical policies and define regimen preferences allowing providers insight into treatments that meet the plan's requirements for reimbursement.
- Real-time access to actionable information via Eviti's extensive Evidence-Based Medical Library, covering over 5,000+ up-to-date, evidence-based treatment regimens and over 10,000+ federally-registered clinical trials. Data is meticulously compiled from leading governmental and industry sources by expert oncologists, nurse practitioners, and informatics professionals.

Capacity versus complexity.

The upsurge in data available for medical decision making threatens to overwhelm human cognitive capacity (maximum five variables per decision).

Eviti Connect brings payers and providers together at the point of care to authorize oncology treatment plans in real time, aligning high quality care with appropriate reimbursement.

KEY BENEFITS

Realize savings through cost avoidance – Health plans pay for evidence-based, quality care previously proven effective for each member's specific diagnosis. Eliminate extra costs associated with unnecessary supplemental treatments and hospitalizations.

Streamline operational workflows – Eviti Connect greatly improves operating efficiency, eliminating time spent over the phone, faxing medical records, and checking authorization status. Eviti Connect enables practices to quickly determine evidence-based treatments included in payers' policies, which expedites the authorization process by reducing patient wait times and allowing treatment to begin promptly.

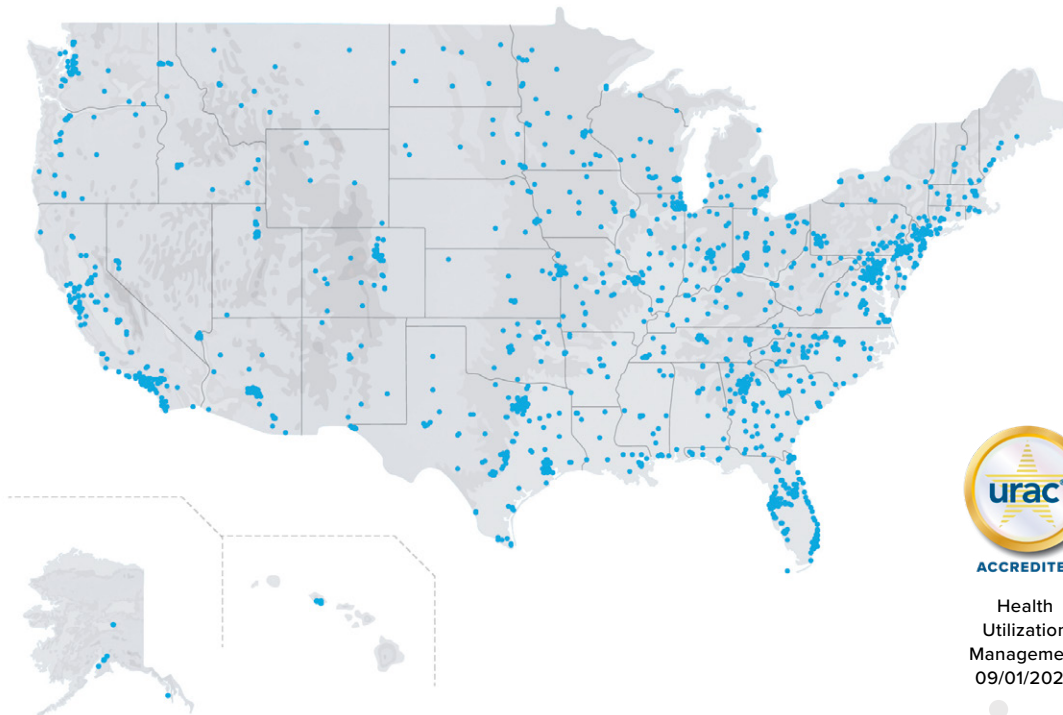

Optimize provider adoption – Many oncology practices are already using Eviti Connect to receive cancer treatment authorization for members of other health plans.

GETTING STARTED

Eviti Connect is an online application that requires no installation or maintenance by physicians or practice staff. Eviti Connect integrates seamlessly with Eviti Advisor, a web-based, oncological clinical decision support platform that allows clinicians to review treatment options and select a clinically appropriate treatment that optimizes clinical outcomes. Together, Eviti applications provide advanced cancer care by aligning the priorities of physicians, payers, and patients at the moment of clinical prescribing. Patients can begin treatment without delay.

Over 7,700+ practices across the U.S. have registered in Eviti Connect to authorize treatment.
