VMware no longer supports vSphere 5.1. Have you upgraded to 6.5 yet?

VMware vSphere is the industry's leading virtualization platform. It provides a powerful, flexible, and secure foundation for business agility that accelerates the digital transformation to cloud computing and success in the digital economy.

vSphere 6.5 supports both existing and next-gen apps through:

- simplified customer experience for automation and management at scale
- comprehensive built-in security for protecting data, infrastructure, and access
- universal app platform for running any app, anywhere
- proactive datacenter management to address potential issues before they become serious problems

With vSphere 6.5, customers can now run, manage, connect, and secure their applications in a common operating environment, across clouds and devices.

Why Upgrade

vSphere 6.5 provides a highly available, resilient, on-demand infrastructure that is the ideal foundation for any cloud environment. It offers innovation that will enable digital transformation for the enterprise, and makes the IT administrator's job simpler, freeing up time to innovate rather than maintaining status quo. Some key new capabilities of vSphere 6.5 include:

- Simplified Architecture, Streamlined Operations
- Modern User Interface
- Comprehensive Built-In Security
- Proactive Datacenter Management
- vSphere Integrated Containers
- Advanced Processor

vSphere 6.5 is also the foundation of VMware's hybrid cloud strategy moving forward and is required for cross-cloud architectures.

Plan Your Upgrade Today

IIS Technology is here to help you migrate to vSphere 6.5 and take full advantage of all the latest features. Our proven methodology starts with an in-depth assessment of your current production infrastructure (servers, storage and networking) as well as your business requirements. This information is used to develop a detailed design and remediation plan. PMI Certified Project Managers are assigned to every project to ensure a timely and successful implementation – and as with all IIS projects, knowledge transfer and as-built documentation are provided throughout the course of the engagement.

More information on vSphere 6.5 can be found in the links below:
