Agorai and DADI Announce Partnership to Further Democratization of AI

DADI to Provide Blockchain Based Distributed Cloud Services to Agorai Marketplace Participants

New York, NY, April 16, 2018 – Agorai, the only integrated marketplaces for Artificial Intelligence (AI) tools and the data assets that fuel them, and DADI, a global decentralized cloud services platform built using blockchain technology, have today announced a partnership that will enable Agorai's mission of putting AI in the hands of those who need it.

Under the agreement, DADI will integrate its decentralized cloud services platform with Agorai's AI and Data Marketplaces, providing a secure and cost-effective alternative via which to distribute and store Agorai content.

"Agorai's mission is to democratize AI, moving away from how it is controlled today, where a few large corporates own both the data that fuels AI development and the creation and distribution of AI tools and applications themselves," says Josh Sutton, CEO, Agorai. "Integrating with DADI will provide our participants with a much-needed choice of how they interact with our platform, keeping costs low, distributing compute power and ensuring anyone can access our platform to make use of data assets, or to access AI tools and applications."

For participants in the Agorai AI and Data Marketplaces, the DADI partnership enables them to choose how they connect to the platform, with the option to use DADI's decentralized architecture for cloud-based storage and processing. Designed to support the democratization of the internet, and owned by its users, DADI offers cost-efficient fog computing organized by a Decentralized Autonomous Organization (DAO), removing the need for customers to pay up front for private cloud computing platforms.

"DADI and Agorai share the belief that decentralization is going to change everything," says Joseph Denne, Founder and CEO, DADI. "For us this centres on how computing power is distributed across the internet and putting ownership back into the hands of those who use it. We are pleased to partner with Agorai to help ensure their marketplaces remain open to anyone who wants to use them."

Made up of two distinct marketplaces and built on blockchain technology, Agorai allows people to retain ownership of their own AI tools and data assets, while enabling others to access them at scale, across the globe.
