

How We Engage

Agorai Delivers

Bespoke application development requires extended timeframes for requirements definition, with the cost of change rising dramatically in later phases. Using Agile methods or package solutions adds only so much efficiency. Using AI-enabled products changes the delivery paradigm.

AI solutions are paving the way for businesses to drastically reduce go-to-market times, as well as reduce the cost of implementation. Our team of experts have experience delivering AI solutions as well as leading enterprise transformation programmes at some of the largest firms on the planet.

AI Transformation Strategy

Agorai applies world-class expertise to help you understand how to leverage AI as a strategic asset. Our approach holistically assesses impact to people, processes, and customer experience and is designed to collaborate with existing business transformation efforts.

AI Product Selection & Implementation

We make selecting and implementing AI solutions simple. We are constantly scouring the market for the best solutions available and provide you with a curated suite of applications based on your specific needs. Agorai also provides full delivery capabilities to meet your needs – whether that be program management or fully owning the deployment of a product.

Bespoke AI Solutions

Some AI solutions may require development of new models, modifications of existing functionality, or intensive exercises to structure data appropriately. Agorai provides the expertise required to help get the best leverage from AI for your unique needs, without incurring the costs of a full, in-house team.
