

# REMOTE VIEWING SOLUTIONS

FROM ITECH DIGITAL

iTech Digital's remote viewing software offers the flexibility to remotely access security cameras and monitor store locations anytime and from anywhere. With i2i systems customers have the option of viewing via a desktop, laptop, tablet or smartphone.

**Single Client Viewer** — This proprietary remote software application allows customers to view cameras in live mode or in playback at a single location. Burn AVI clips and snapshots, change settings and user permissions and adjust picture values while working offsite.

## **Mobile Viewer** —

Conveniently view live camera images while on the go via smartphone or tablet. This browser-based viewer includes standard features such as pinch to zoom and screen auto rotation.

## **Multi-Location Viewer** —

This application enables users to view live video from multiple locations on one screen. Create custom groups of cameras for auditing purposes or side-by-side comparison during peak times of day. Search for organizational inefficiencies and burn AVI clips for training purposes. Use this to mitigate risk and maximize bottom line profitability.
