

News Release

CGR Products in Greensboro, NC expands with a 30,000 sq. ft. addition

CGR's growth over the past several years has fueled new equipment purchases and the need to stock higher volumes of inventory necessary to support that growth. This growth led to overcrowded manufacturing and warehouse conditions that hampered additional growth opportunities and created an inefficient working environment. The 30,000 sq. ft. expansion increases the current footprint by almost 50% and will ease crowded conditions in manufacturing and warehousing areas and position the company to pursue new opportunities. Future business growth should lead to additional labor and machinery necessary to support that growth.

About CGR Products (www.cgrproducts.com)

Since its beginnings in 1963 as Carolina Gasket and Rubber Company, CGR Products has been the go-to provider of customized fabrication solutions for OEM markets. CGR Products cuts, slits, laminates, and skives, materials into precision components at three locations – including its corporate headquarters in Greensboro, NC, as well as in Decatur, AL, and Waukesha, WI.

CGR Products - Greensboro, NC adds a new wide format die cutting press

CGR Products in Greensboro, NC has added its 2nd Bruno wide format die cutting press, adding more capacity for large volume orders. This new press has a cutting size of 84" x 75" and uses a power-driven belt to move material and parts along.

"This new press is ideal for large volume customers or large surface area parts in the automotive, transportation, heavy equipment, and filtration markets" said Alan Johnson, Sales Manager at CGR Products.

Bruno presses are made in the USA and used by large manufacturing companies throughout the world, primarily in the automotive and gasket industries. With two Bruno wide format die cutting presses, CGR Products is ideal for truckload and trailer drop converting. These presses have dedicated loading docks for truckload in-out services.

CGR Products - Decatur, AL adds a new high volume rotary die cutting machine

CGR Products in Decatur, AL has added a new high volume Delta Modtech rotary die cutting machine. This machine accommodates die cut parts up to 13" wide. Individual servo controls at each die station allow for precision tolerances and independent speeds of each other to utilize maximum material savings.

Delta Modtech's machinery has been highly sought after for over 30 years. Delta Modtech is known to build complex and tight tolerance die cutting machines with the highest quality materials.

This new rotary system is ideal for high speed, cost-effective and precision cut parts on high volume orders. It is ideal for "kiss cut" or "peel and stick" applications. Kiss cutting is performed by cutting through the part down to, but not through, the release liner. The parts are supplied on a roll or pad for easy "peel and stick" application.
