

RETAIL

Fleet Delivery

Federal mandates requiring the presence of Electronic Logging Devices (ELD) have transformed how retailers track their fleet shipments. Now, a driver's mobile device must be multi-purpose: WAN-enabled, transmitting electronic Proof of Delivery (ePOD), offering real-time location visibility and more. Mobile smart devices are now a key cog in the process of ensuring retail delivery integrity and efficiency.

Properly deploying and managing these devices, however, poses a specific set of challenges.

- Buying, provisioning and supporting updated hardware can be expensive.
- Understanding which solutions are ideal for your business requires dedicated strategic expertise.
- Managing and supporting a wide scale deployment and maintenance of these devices for a large force of in-the-field drivers requires extensive resources.

Don't let your lack of mobility expertise limit your business. The speed of innovation isn't slowing down, but your business will if you're not linked with the right mobility partners. **Get smarter** about your mobile delivery enablement strategy by finding a partner to give you the "How" on creating a true mobile blueprint. One who can:

- Execute large-scale mission critical mobile deployments and provide best-in-class "Day Two" support and management of your mobile devices.
- Provide a single dashboard enabling you to oversee your entire device and usage ecosystem.
- Transform your business with turnkey solutions for agile, flexible frameworks.
- Tie it all together with a single point of support across a range of vendors, solutions and devices.

Get Stratix as your managed mobility partner! Our solutions offer insights and visibility to ensure you have more control over your retail delivery fleet than you have today. We'll make sure your drivers have the ideal mobile devices and applications for efficient tracking, and it's all backed by best-in-class 24/7/365 support to keep your fleet moving with end-to-end visibility.

Modernizing the ELD Solution for a Leading Freight Shipping Provider

One prominent national LTL freight shipping provider is known for offering a wide variety of shipping services to a range of clients. When they needed a large-scale replacement of traditional rugged ELDs for 6000 drivers, they realized they would need a managed mobility partner to offer true life cycle management, from provisioning and kitting to spare pool inventory management to reverse logistics to recycle out-of-circulation devices. They turned to Stratix to craft a smarter mobile fleet delivery solution.

The Stratix solution was multi-tiered:

- Architect a personalized mobility solution for optimal ROI on mobile spending.
- Configure and deploy Samsung S8 and S8 Active devices for fleet drivers.
- Provide support for RMA processing of troubled devices.
- Resell Samsung® Elite Plus Extended Warranty services for advanced exchange and support.
- Offer reverse logistics to restage and redeploy select devices to mitigate cost.

This shipping provider is now moving forward in partnership with Stratix for an even larger 9000-driver deployment of mobile devices for full truckload shipments. With a trusted managed mobility partner in tow, they're perfectly positioned to navigate the mobile delivery challenges of both today and tomorrow.
