

# Medical Questionnaire

## CROHN'S DISEASE

Description: Crohn's disease is a chronic inflammation in the digestive tract, leading to abdominal pain and cramping, severe diarrhea, bleeding and weight loss. It mainly impacts the small or large intestine. Attacks can be chronic or isolated. Complete remission can occur. Surgery is sometimes required if medications are unsuccessful.

---

Age of client: \_\_\_\_\_ Date of diagnosis: \_\_\_\_\_

Date of last attack (attacks characterized as abdominal pain and cramping, severe diarrhea, possibly with bleeding): \_\_\_\_\_

Frequency and severity of attacks: \_\_\_\_\_

Type of treatment or medication prescribed: \_\_\_\_\_

Any hospitalization or surgery (include dates and details): \_\_\_\_\_

---

Any continued symptoms or complications: \_\_\_\_\_

Current build: height \_\_\_\_\_ft \_\_\_\_\_in weight \_\_\_\_\_lbs

Is the client underweight:  Yes  No  
(If yes, see Obesity/Underweight Questionnaire)

Has the client's weight been stable over the last year: \_\_\_\_\_

Is the client anemic (reduction in red blood cells):  Yes  No  
(If yes, see Anemia Questionnaire)
