

3-GIS | Mobile

Your fiber network data available onsite all the time with 3-GIS | Mobile

3-GIS | Mobile addresses the unique challenges of designing, building, and restoring fiber networks in a time sensitive environment. 3-GIS telecom network information and intelligent planning tools allow the engineering team to design fiber networks faster than ever before and ensure the network is built according to your design specifications. Every function in 3-GIS saves time-to-approval for your engineering and construction resources from modeling a connected network to constructible work packets.

What 3-GIS can do for you

3-GIS | Mobile puts your network data directly in the hands of work crews, allowing you to improve the efficiencies of your critical rideouts. By enabling mobility, field engineers have a solution that allows them to work offline and synchronize their updates upon connection giving you the information to keep your system records accurate. With its configurable interface to support the job-at-hand, field crews get access to tools and information they need to perform their work with minimal clicks.

About us

Since 2006, 3-GIS has been helping the telecom industry achieve better results. 3-GIS is designed to meet the challenges of building and managing increasingly complex fiber networks. The company is pioneering a geo-database approach based on modeling the light path and machine prescription. Web-based services boost the market opportunities of fiber assets for our service providers, network providers, and engineering firm customers.

The company is headquartered in Decatur, Alabama, USA with a sales and support office in Bern, Switzerland. 3-GIS offers development, product, and network design services. The company employs professionals in the fields of network engineering, computer science, and geographic information systems serving deployments in 16 countries. Our staff challenges the status quo every day, improving the economic visibility and reliability of fiber networks. Our system supports a more connected, informed, and lighted world.

3-GIS provides quick and easy fiber management solutions

Capabilities

- > Synchronize field updates
- > Redline network data in the field
- > Android compatible
- > Find feature
- > Related record editing
- > GPS capture
- > Redline tools
- > Share data immediately
- > Track construction status
- > Requires minimal training
