About us

Since 2006, 3-GIS has been helping the telecom industry achieve better results. 3-GIS solves the problems of the telecommunications industry for managing physical network assets with SaaS delivered software and expert services. The company is headquartered in Decatur, Alabama, USA with auxiliary offices in Bern, Switzerland and Tampa, Florida, USA. Our US offices have development, design services, product support, and project management teams, while our Bern office has sales and support teams. All challenging the status quo every day to improve the economic efficiencies of fiber networks; creating a more connected, informed, and lighted world.

3-GIS offers a full suite of network management applications including a browser-based application, mobile application, an administrator application, and extension tools for planning and designing networks, as well as services to support our software.

3-GIS network management solutions are designed to address industry's business needs in a way that makes sense for users in every role in the enterprise while lowering the total cost of ownership. This means lightening the data transfer load, reducing computing requirements, making it easy to interface with other business systems, improving scalability and usability, reducing maintenance needs, and providing information in the ways users need to see it while maintaining data integrity. Our software and services are built on a solid architecture for innovations that encompasses every stage of the physical network expansion and operation.

Our products

3-GIS | Web

Model where network assets are located and understand how they interact to bring service to the end customer.

3-GIS | Mobile

Improve the efficiencies of critical rideouts by putting network data directly in the hands of work crews.

3-GIS | Prospector

Bring the speed of a routing engine to create routes in minutes.

3-GIS | Network Express

Apply user-defined architectural rules to design the network that meets the business needs.

Engineering Services

Put experts and 3-GIS applications into practice to help win and deliver new projects.
