3-GIS | Prospector Planning

With 3-GIS Prospector Planning your next network just got easier

The 3-GIS Web extension, Prospector, brings the speed of an architectural engine to network planning. Network planners can use Prospector to create a route to reach thousands of points in minutes.

What it can do for you

Prospector, looks across specific network variables defined by the engineers such as; existing infrastructure, regulations, geographic barriers, and construction costs then use an architecture engine to prescribe a route and placement of network features. Putting Prospector into the design workflow lets the business focus on high level engineering while adding computational speed to planning networks. Better routes and more accurate cost estimates helps companies plan faster, respond to bids more quickly, and reduces engineering risk.

Speed to revenue

Rules-based consistency

Budgetary costs

About us

Since 2006 3-GIS has been helping the telecom industry achieve higher performance results. Designed to meet the challenges of building and managing increasingly complex fiber networks, 3-GIS is pioneering a data driven approach based on geospatial reference, rules-based calculations, mobility, and web-based services that is revolutionizing the potential to realize market opportunities of fiber assets. The company is headquartered in Decatur, AL USA where we have development, design services, product support, and operational staff challenging the status quo every day to improve the economic visibility of fiber networks; creating a more connected, informed, and lighted world.

3-GIS provides quick and easy fiber management solutions

Capabilities

> Accurate cost estimates in minutes
> Find revenue opportunities
> Rules-based prescribed routes
> Avoid crossing costly construction barriers
> Increase scale of production without increasing staff
> Automated QA/QC control checks to defined best practices
> Least cost routing
