

Mobile Inspection Software by **Mi-Corporation**

Immediate Inspection Insights

Mobile Inspection Software by Mi-Corporation provides inspectors with a robust data repository--either hosted or on-premise--for inspection data, with a database structure based on industry-standard technology.

The data collected in the data repository can be analyzed using tools such as SQL Reporting Services to display reports, which executives can use to gain immediate, accurate, and extremely detailed insights into the efficiencies of field staff and operations.

When inspections generate *big data*, you get *big results*.

Mobile Inspection Software features include:

Any Device: Like other Mi-Co products, Mobile Inspection Software works with the devices you want to use: iPads, Android tablets, and Microsoft Windows devices, PCs, Anoto Digital Pens, virtual & on-premise servers, laptops, and more.

Online and offline: Unlike web-only solutions, Mobile Inspection Software works in remote field situations when a hot-spot is not available.

Powerful analytic tools: Gain immediate and actionable insights from data using included interactive graphs and charts among other tools with near real-time updates.

Our user-friendly solutions work on- or offline to capture rich data, and include analytic tools to gain real-time insight into your workforce and company operations. Monitor field staff, KPIs, and metrics to increase productivity. Manage your company even while mobile: on any device, anywhere.
