

Universal Data Mover Gateway

- Automate event-based and scheduled processes and file transfers between B2B partners
- Protect data using government-grade encryption and secure file transfer protocols
- Unifies all services, users, and processes into one easy-to-manage solution
- Synchronize server configuration data in real-time to one or more failover servers
- Achieve PCI DSS, HIPAA, SOX, and GLBA compliance requirements
- Supports all major platforms, including Windows, Unix, Linux, and Mac OS X

Expedite your file transfers up to 100x using an accelerated file transfer protocol (AFTP).

Universal Data Mover Gateway (UDMG) is a reliable and high-performance solution for B2B file transfers. It offers high availability with synchronized production and failover servers. UDMG automates, secures, and simplifies your B2B file transfers to:

- Reduce time to market with quick onboarding and easy management of protocols, business partners, and users.
- Improve visibility through a centralized dashboard with real-time monitoring.
- Enhance perimeter security through authorized file transfers in a DMZ without any open inbound ports.
- Automate the integration of backend applications and systems.

Managing the flow of mission-critical B2B data doesn't have to be challenging or time consuming.

High Performance and Availability

B2B file transfers are mission critical – there's no time for downtime. UDMG is a reliable and high-performance solution offering high availability with synchronized production and failover servers.

Community Management

Quick turnaround is essential when onboarding or maintaining your trading partner network. UDMG community management provides rich features for deploying networks, as well as custom and preconfigured templates.

Certificate Management

Comprehensive certificate management allows for overlapping certificates and scheduled certificate replacement to meet each of your trading partner's needs.

Advanced Multiprotocol Communications

UDMG supports and accelerates all major file transfer protocols, including FTP/S, SFTP, SCP, HTTP/S, ebDAV, and AFTP.

Automation Integration

UDMG makes it easy to coordinate your file transfers with the processes that create and consume your data. Whether you use the Stonebranch Universal Automation Center or other vendors, UDMG is a valuable addition to your automation toolkit.

Securing File Transfers Through Your DMZ

Storing or staging sensitive data in the DMZ violates most regulatory compliance standards. UDMG prevents any of this data from landing in the DMZ, and prevents inbound internet-based connections from accessing your internal network.

Monitor FTP, SFTP, and FTPS File Transfers

The UAC can show you all of the systems running FTP, who's using them, and what they're doing. It's a great first step to a consolidated management strategy for your file transfers.

Stonebranch Simplifies Real-time Automation

Stonebranch builds IT orchestration and automation solutions that help enterprises break down automation silos while gaining centralizing control of automated jobs, tasks, and workloads.

The Universal Automation Center platform supports your entire hybrid IT environment, including on-premises, cloud, and containerized microservices. The platform runs automation in real-time, responds intelligently to business needs, and integrates with just about any application or platform you can throw at it.
