Technatomy Corporation and InnoVelocity Formalize Intelligent Automation Delivery Partnership

Fairfax, VA — Technatomy Corporation, a leading federal systems integrator, and InnoVelocity, Inc., a San Francisco-based digital process automation services firm, have agreed to jointly develop and deploy digital process automation (DPA) and robotic process automation (RPA) applications for the federal government sector. The new, two-year agreement significantly strengthens and expands the organizations' capability to meet federal agency intelligent automation solution delivery needs.

“Together, InnoVelocity and Technatomy are a potent, efficient team that offers a proven formula to achieve mission results. This new agreement further aligns, supports and focuses our two organizations mutually on the rapid, quality deployment of modern, digital process automation solutions to federal agencies,” explains Steven Kousen, Technatomy’s Chief Technology and Innovation Officer.

Recently, the firms deployed an initial set of cloud-hosted, digital process automation (DPA) solutions successfully for the National Institutes of Health.

“The era of low-code, cloud-based, shared services applications is upon us and that fact is simply game-changing for our federal government,” says Neil Simpson, CEO of InnoVelocity. “In Washington, each dollar and minute are scarce, precious public resources. We’re thrilled to be working with Technatomy to bring our extensive commercial DPA implementation experience to federal agencies demanding modern business process automation capability in timeframes that are often measured in only weeks.”

About InnoVelocity

InnoVelocity, Inc. is a leading systems integrator and management consulting firm specializing in Digital Process Automation (DPA) technologies including Bizagi, UiPath and Tableau. InnoVelocity has a 12-year track record helping industry leaders in healthcare, finance, manufacturing and government achieve outstanding business results. The firm’s nationwide team of consultants are DPA experts, offering deep technical expertise and business experience to assist the entire project lifecycle.

About Technatomy

Technatomy Corporation is a leading federal systems integrator and niche provider of Digital Process Automation (DPA) and Robotic Process Automation (RPA) solutions and services for government healthcare, logistics and financial applications. Located in Fairfax, VA, its IntrafaciX Innovation Lab highlights integrated artificial intelligence, machine learning, analytics, data visualization and IoT technologies. The firm’s dedication to customer satisfaction is exemplified by 200 well-credentialed associates, CMMI Level-4 appraised quality processes and 18-year history of service excellence.
