EDI MADE SIMPLE®

REMOTE WAREHOUSE INTEGRATION

BENEFITS FOR VANTAGE POINT EDI USERS

- Provides the means for efficient and error-free communication with Remote (3PL) Warehouses

- Saves time by transmitting outbound shipment and billing orders automatically

- A key ingredient for efficient and accurate supply chain distribution activities

- Automatically generates the 940 Warehouse Shipping Order directly from pick tickets

- Selects orders for billing from the 945 Warehouse Shipping Advice

Integrated EDI Documents Save Time and Eliminate Errors

Does your company use or plan to use remote (third-party logistics) warehouses for the distribution of goods? Does your company provide warehouse distribution services or contract manufacturing services to your customers? If so, many warehouses utilize an electronic business document exchange system that saves time, increases efficiency and eliminates common errors.

Vantage Point EDI enables your company to integrate all of the documents you may need to exchange with your warehouse or your customers. These documents specifically include the Warehouse Shipping Order (940), Warehouse Shipment Advice (945), Warehouse Stock Transfer Shipment Advice (943), Warehouse Stock Transfer Receipt Advice (944) and the Warehouse Inventory Adjustment Advice (947). All of these documents can be seamlessly integrated in and out of your ERP platform.

Efficient, accurate and integrated supply chain distribution

Vantage Point EDI can leverage these documents to automatically communicate your desire to ship products to customers, automate billing processes, communicate advance notice of inbound goods, automate the receiving of goods (including the registration of serial and lot information), integrate shipment tracking details, order billing and other processes that can save enormous amounts of time and money.

These integrated documents, coupled with the Warehouse Inventory Adjustment Advice and the Inventory Inquiry, can support an automated

perpetual inventory reconciliation process. This process monitors your inventory levels with that of your remote warehouse to make sure there are no unpleasant surprises for your company and your customers.

Detailed EDI for large retailers

Vantage Point EDI is the perfect EDI system for companies shipping to large retailers, such as Target and Wal-Mart, which require detailed ASN information from the remote warehouse. In addition to billing sales orders and registering shipment tracking information into the ERP, Vantage Point EDI will transform shipment information into detailed, partner compliant Advance Ship Notices that can be transmitted directly to your partners.

File format flexibility

Files can be loaded and integrated from virtually any formats, including ANSI X.12, EDIFACT, ASCII delimited or fixed length, XML and Excel spreadsheets.

Bidirectional

If your company provides warehouse services or subcontract manufacturing for other companies, Vantage Point EDI has native functionality to seamlessly integrate all of these documents with the ERP. Supporting EDI for this business scenario not only saves time and money, it can make the difference between winning new business or not.
