

CYBERFEED for Nationwide Security Organizations

Cyberfeed is AnubisNetworks threat intelligence platform that allows organizations to obtain actionable and contextualized insights into security threats.

THE NEED FOR ACTIONABLE INTELLIGENCE

Every Defense and Homeland Security organization need high-quality and actionable information to defend a nation's critical infrastructure. Cyberfeed enables this type of organizations to obtain real-time threat intelligence that has low false-positive rates and enriched event information. Additionally, organizations can put this data into action through instant sharing of infection details and remediation information to critical infrastructure organizations. Cyberfeed easily integrates with the most common incident management systems.

Cyberfeed empowers national surveillance teams to actively monitor and share critical infections and vulnerabilities information to gain insight on the country-level threat landscape.

INFECTION DETECTION

Intelligence on infections and compromised systems.

SOCIAL AWARENESS

Monitor activity on social sites to preemptively establish new attack vectors.

COMPROMISED SYSTEMS

Malware analysis of websites, files and email.

EMAIL ECOSYSTEM

Understand spam campaigns and compromised messages.

KEY BENEFITS

Understand countrywide threat landscape and emerging infection activity

Identify riskiest critical infrastructure sub sectors within country

Instantly provide infection details and remediation information to critical infrastructure providers
