Ambrell Expands to a Larger Netherlands Office

Thanks to increasing business and an expanded product line, Ambrell has moved to an office in Hengelo

Hengelo, NL — Ambrell, a leading manufacturer of induction heating systems, has moved to a new office in Hengelo, NL. The European office had been based out of Almelo, NL, but the company needed more room for a high power applications lab, systems storage, parts storage and employee offices.

Ambrell's new Netherlands office is double the size of its previous location. The high power applications lab will enable additional applications testing with Ambrell's expanded line of high power induction heating systems. More warehouse space permits added systems and parts storage, which will result in shorter lead times for systems and immediate turnarounds for new parts.

The new office also meets the needs of Ambrell's growing base of European employees, which has been fueled by growth in the European marketplace. The added space will benefit customers during visits, as they can visit the new high power applications lab and have more space to meet and discuss their applications. Located 20 kilometers from Germany, the office is convenient for a large number of customers and prospects.

"The new, larger office helps us to better meet the needs of our ever-growing base of customers," said Bruce N. Stewart, Managing Director of European Operations. "We've had great success in the European market, particularly from OEM customers and customers with large applications. This demand has resulted in considerable corporate growth, which necessitated a larger office to better serve our customers."
