Time to secure the way we work today

Fyde offers a first-of-its-kind service that protects any device on any network accessing Internet resources, both for consumers and businesses.

Fyde blocks phishing, malware, ransomware download sites and command & control callbacks in real-time without any performance impact.

On-device network gateway

Security policy that roams

Real-time policy updates

Retrospective search for IOCs

support for various threat intel sources

Instant blocking at device level

No latency or battery impact

Increased privacy due to local inspection

Crowdsourced attack telemetry
