

Data Science Partnership

Across an alphabet of industries, from automotive to utilities, greater volumes of data are being generated at a greater velocity and in greater variety than ever before.

Business leaders in functions such as R&D, engineering, operations, manufacturing and marketing all share an urgent need for analytics services that deliver real, tangible value from this precious new resource.

“The ability to work together quickly and flexibly is critical.

The best processes are highly iterative, requiring business, IT, and analytics teams to rapidly review real-world results, recalibrate analyses, adjust assumptions, and then test outcomes.”

McKinsey

TESSELLA DATA SCIENCE PARTNERSHIP

The managed service that is revolutionising analytics-driven business value

- Accelerate product development
- Reduce cost and boost operational performance
- Improve customer insight and brand loyalty
- Discover new insights through the fusion of internal and external data
- Create competitive advantage

“We really like the way the flexibility allows us to gradually evolve the scope of services to incorporate a wider set of business areas.”

“A 5 person team resourced dynamically from the Tessella global talent pool delivers the same value as a 20 person permanent team.”

“Projects start in days rather than weeks and finish in weeks rather than months.”

How a Tessella Data Science Partnership works

On-site data science partner

We embed a dedicated data science partner on your site to work alongside your in-house teams and other 3rd party suppliers. This allows us to prioritise those workstreams that will generate the greatest ROI.

o o o o o o

Virtual data science team

The partner leads a virtual data science team. The team size is dynamically scaled, flexing to meet the changes in your data science demand. The virtual team composition continually evolves to supply the breadth of skills needed.
