

# Harris On Demand The Harris Poll 

2019 Consumer Financial Literacy Survey

Prepared For:

March 25, 2019

## Survey Methodology

The 2019 Financial Literacy Survey was conducted online within the United States by Harris Poll on behalf of the NFCC (National Foundation for Credit Counseling) between March $8^{\text {th }}$ and March $13^{\text {th }}, 2019$ among 2,086 U.S. adults ages $18+$. Figures for age, sex, race/ethnicity, education, region and household income were weighted where necessary to bring them into line with their actual proportions in the population. Propensity score weighting was used to adjust for respondents' propensity to be online. Prior to 2013, this survey was conducted by telephone.

All sample surveys and polls, whether or not they use probability sampling, are subject to multiple sources of error which are most often not possible to quantify or estimate, including sampling error, coverage error, error associated with nonresponse, error associated with question wording and response options, and postsurvey weighting and adjustments. Therefore, Harris Poll avoids the words "margin of error" as they are misleading. All that can be calculated are different possible sampling errors with different probabilities for pure, unweighted, random samples with $100 \%$ response rates. These are only theoretical because no published polls come close to this ideal.

Respondents for this survey were selected from among those who have agreed to participate in Harris Poll surveys. The data have been weighted to reflect the composition of the adult population. Because the sample is based on those who agreed to participate in the Harris Poll panel, no estimates of theoretical sampling error can be calculated.

## Significance Testing

When results from sub-groups of a sample appear in the detailed tabulations, an indicator of statistically significant differences is added to the tables run on our standard demographic banners. Significance testing is done to the $95 \%$ confidence level, and the test is performed on percentages as well as mean values. Each sub-sample is assigned a letter. When the percentage of one sub-sample is significantly different from the percentage of another sub-sample, the letter representing one of the two samples appears next to the percentage (or mean) of the other sample.

For instance, the percentage of males answering yes to a particular question may be compared to the percentage of females answering yes to the same question. In the example below, the male sample is assigned the letter B, and the female sample is assigned the letter C. Here, respondents were asked whether a certain business practice is acceptable. $67 \%$ of women said that it was -- a proportion significantly greater than the $57 \%$ of males who believe that the practice is acceptable. To indicate that women are significantly more likely to find the practice acceptable than are men, the letter B-- the letter assigned to the male subsample -- appears next to the " $67 \%$ " in the female column. Similarly, the $37 \%$ of men that find the practice unacceptable is significantly greater than the $29 \%$ of women who do so and, therefore, the letter C-- the letter assigned to the female sub-sample -- appears next to the " $37 \%$ " in the male column.

|  |  | Sex |  |
| :--- | :---: | :---: | :---: |
|  | Total | Male | Female |
|  | $\mathbf{( A )}$ | $\mathbf{( B )}$ | $\mathbf{( C )}$ |
| Unweighted Base | 977 | 488 | 489 |
| Weighted Base | 967 | 464 | 503 |
| Acceptable | 611 | 274 | 337 |
|  | $63 \%$ | $57 \%$ | $67 \% \mathbf{B}$ |
| Not Acceptable | 319 | 171 | 148 |
|  | $33 \%$ | $37 \% \mathbf{C}$ | $29 \%$ |
| Don't Know | 37 | 18 | 19 |
|  | $4 \%$ | $4 \%$ | $4 \%$ |

## Key Findings

## Budget, Spending, \& Saving

In 2019, about two in five U.S. adults (42\%) - a proportion that has held roughly steady since 2007 - say they have a budget and keep close track of how much they spend on such things as food, housing, and entertainment.

- Over half of U.S. adults (56\%) are now spending the same as last year, while similar proportions are now spending more (23\%) or less ( $21 \%$ ) than before.
- Nearly 3 in 5 adults (59\%) say they are now saving the same as last year, while the proportion who say they are saving more (26\%) greatly exceeds those who are saving less (15\%).

The proportion of U.S. adults that has non-retirement savings remains 7 in 10 ( $70 \%$ ), with most adults saving or investing their money in a savings account ( $65 \%$ ).

## Retirement

When it comes to retirement savings, nearly 2 in 3 U.S. adults (65\%) say they save some portion of their household's annual income for retirement, the same proportion as 2018 (65\%), an increase of 5 percentage points since 2017 ( $60 \%$ ). One in ten (10\%) now say they save more than $20 \%$ of their household's income for retirement.

Despite the fact that most are saving at least something for retirement, fewer than 1 in 5 U.S. adults (18\%) feel very confident - and over 1 in 4 ( $27 \%$ ) are not confident at all - that they are saving enough. And, when asked what areas of personal finance worry them most, the top response continues to be retiring without having enough money set aside (17\%), followed closely by insufficient "rainy day" savings (14\%).

## Homeownership

Considering the current housing market, half of U.S. adults (50\%) feel buying is more affordable, while about 1 in 4 believe renting is more affordable ( $26 \%$ ) and a similar proportion (24\%) are not at all sure.

Most ( $80 \%$ ) have tried to purchase their own home, and $70 \%$ are currently homeowners. The top 5 barriers faced by potential homeowners are:

- Rising home prices;
- Lack of funding for the down payment or closing costs;
- Existing debt;
- Limited housing options within available budget; and,
- Poor credit history or low credit score.

Credit Card Debt
A majority of U.S. adults (60\%) have had credit card debt in the past 12 months, and nearly 2 in $5(37 \%)$ indicate their household carries such debt from month to month. Few have done something in an attempt to obtain a lower interest rate for their credit card debt (though more so than last year), primarily because they are satisfied with their current rates or they had never thought of it.

## Key Findings (continued)

## Knowledge of, and Confidence in, Personal Finance

Over half of U.S. adults (55\%) continue to give themselves a grade of A or B on their knowledge of personal finance, and nearly 9 in 10 ( $88 \%$ ) say they are very or somewhat confident that the last time they made a big financial decision (such as picking a credit card, buying a car, or refinancing their mortgage), they made the right choice. At the same time, however, over 1 in $10(12 \%)$ admit they are not very or not at all confident, a statistically significant increase over past years.

While about 3 in 4 ( $76 \%$ ) agree - including over 1 in 4 ( $27 \%$ ) who strongly agree - that they could still benefit from advice and answers to everyday financial questions from a professional, the proportion who disagree with this statement has increased compared to last year ( $24 \% \mathrm{vs} .21 \%$, respectively).

When asked who they would turn to for general financial/money management guidance, the top response remains a financial professional such as a CPA or financial planner (35\%), followed closely by friends and family (32\%).

- Compared to a couple of years ago, fewer U.S. adults would now turn to a bank or credit union ( $25 \%$ in 2019 and 2018 vs. $32 \%$ in 2017 ), or a professional non-profit credit counseling agency (11\% in 2019 vs. 14\% in 2017).

Debt and Credit Counseling
While nearly 3 in 4 U.S. adults (72\%) continue to pay all their bills on time and have no debts in collection, one in four (25\%) admit they do not pay their bills on time, a sustained increase compared to 2017 ( $25 \%$ in 2018 as well vs. $22 \%$ in 2017 and 2016).

Only $17 \%$ of all U.S. adults say they have never had any debt, while more than half ( $54 \%$ ) struggle to minimize their debt, primarily due to unexpected financial emergencies (21\%).

When asked why they would not reach out to a professional non-profit credit counseling agency for help if they were having financial problems related to debt, about one in five adults (22\%) say they can resolve their own problems without outside help.

About one in four U.S. adults (23\%), or over 56 million Americans ${ }^{1}$, indicated they would reach out to a professional non-profit credit counseling agency for help.

## Small Business Financing

If they were looking to start a new business...

- Nearly 1 in 3 (32\%) would seek a business loan through a community (14\%) or national (14\%) bank, credit union (14\%), or online-only lender (6\%)
- About 1 in 4 ( $26 \%$ ) would rely on personal funds ( $22 \%$ ) or liquidate personal assets ( $10 \%$ )
- Just $14 \%$ would apply for a public or private grant, and $15 \%$ would seek an SBA-backed loan

Over one in three U.S. adults (35\%) are not at all sure how they would come up with the money if they were looking to finance a new business.
