

INTERAXO

API - FOR A
MORE EFFICIENT
WORKFLOW

Many of your company's systems can put efficiency to the test, especially if they don't communicate with each other. With Interaxo API, you can link together the systems you use on a daily basis.

The API can retrieve and show information from Interaxo in other systems and applications, as well as send updates. You can also update items and files in your own system and present the data in Interaxo. Thanks to smarter ways of working, your company's workflows will be streamlined, making your job easier.

LOTS OF POSSIBILITIES

Here are a few examples of the many possibilities offered by Interaxo API:

Create a web form on your homepage or in your mobile app.

Data entered on the form can create items for further processing in Interaxo through the API, such as complaints, deviations, etc.

Integrate your field tool with Interaxo. This will allow you, for example, to download the latest version of a drawing direct from Interaxo to your field tool, giving you greater flexibility on the construction site.

Retrieve data and files from Interaxo to other systems, such as archiving or FDU systems.

WHY CHOOSE INTERAXO FROM TRIBIA

With more than 100 000 users, we are a leading supplier on the market of project tools for IT, as well as for the building and construction industry in the Nordic countries.

HOW DO I GET STARTED?

Register as an API Integration Partner on our website:
[INTERAXO.COM](https://www.interaxo.com)

The set-up cost is SEK 4,900 per project and integration.
Each API call requires an active Interaxo user.

We don't want to have to do the same task several times. So, integrating Interaxo with our other systems will really make our work easier."

*- Kristoffer
Project Manager*
