

Pivot Virtual Rounding Powered by Microsoft Teams

Rapidly and securely deploy easy-to-use telemedicine to maximize hospital resources and minimize patient and provider risk – while delivering optimal levels of care.

Around the world, healthcare professionals and provider networks face unprecedented challenges. They must simultaneously handle extraordinary patient volumes, cope with gaps in staffing, struggle with shortages of supplies, and manage risk to their patients and themselves – all while maintaining the highest levels of patient care.

That's why a growing number of healthcare providers are recognizing the value of Pivot Virtual Rounding Powered by Microsoft Teams.

Making Rounds Simpler – and Safer

Throughout hospitals, healthcare professionals make hundreds of patient rounds every day. These check-ins monitor patient health and ensure patient wellbeing. But rounds place an enormous strain on staffing and personal protective equipment

Pivot Virtual Rounding Powered by Microsoft Teams addresses these issues and more. This innovative solution:

- Enables timely check-ins with appropriate healthcare professionals.
- Reduces patient and staff exposure to contagions.
- Substantially lowers demand for PPE.
- Allows healthcare professionals to care for more patients.
- Promotes the high-quality patient care that contributes to successful outcomes.

Pivot Virtual Rounding Powered by Microsoft Teams is fast to deploy and simple to use. The solution leverages the ubiquitous Microsoft Teams teleconferencing software to enable virtual patient consultations. The intuitive solution can easily be configured to meet each facility's unique setup and needs.

The Doctor Will See You Now

Wards, exam rooms, and emergency rooms are equipped with a laptop or tablet that includes a custom configuration of Microsoft Teams. The patient sits in front of the screen, and a staff member launches the videoconference. The patient is alerted when the healthcare professional joins the session, and they engage in a one-on-one consultation.

The audio and video connections are secure. And with the laptop or tablet "locked down," the patient can't accidentally access hospital systems or disclose protected health information (PHI).

To begin virtual rounds, healthcare professionals simply select from a list of relevant rooms equipped with Microsoft Teams. They can ring the room if the patient isn't already online. They can also use Microsoft Teams to communicate with other healthcare professionals.

Flexible Functionality to Meet Your Needs

Pivot Virtual Rounding Powered by Microsoft Teams delivers the telemedicine capabilities you require:

- Easy-to-use software.
- High-quality audio and video.
- Secure communication.
- Device lock-down to prevent PHI exposure.
- Fast, cost-effective deployment.
- Site-specific custom configuration.

Healthcare-Centric Solutions and Delivery

Pivot has deep experience and expertise in healthcare IT. Our solutions are designed and configured by expert healthcare technologists. Our unmatched partner network enables access to best-in-class technology to meet your unique needs.

What's more, our proven methodologies and delivery framework ensure rapid, cost-effective implementation, as well as smooth integration with existing infrastructures and processes. Pivot services span:

- Procurement of devices and software.
- Solution design and implementation.
- "Week One" onsite support.
- Remote first-call support.

Optional services for Pivot Virtual Rounding Powered by Microsoft Teams include complete integration and deployment as well as physical hardware such as device mounts. We also offer a full suite of professional services for Microsoft 365, Microsoft Office 365, and Microsoft Windows 10.

Pivot Virtual Rounding Powered by Microsoft Teams is part of Pivot's Emergency Response Solutions offering. Specifically designed to support rapid enablement, our Emergency Response Solutions empower organizations to maintain the highest levels of performance, productivity, and continuity of operations.

Immediate Advantages

Pivot Virtual Rounding Powered by Microsoft Teams delivers tangible, targeted benefits to hospital networks, physicians, nurses, healthcare staff, and patients alike.

Effective telemedicine:

- Rapid, cost-effective installation, up and running in two days or less.
- Proven, reliable videoconferencing.
- Intuitive features, with one-click access.
- Customizable capabilities to meet unique facility setups and needs.
- Secure protection of patient privacy and PHI.

Improved facility management:

- Increased ability to handle greater patient volume.
- Better management of limited staff resources.
- Reduced risk of exposure for patients and healthcare professionals.
- Lower demands for PPE.

Better experiences:

- Faster cycles for routine health checks.
- Reduced pressures on busy healthcare professionals.
- Continuity of quality care, with improved patient monitoring.
- Optimized patient experience.
- Higher levels of patient and family satisfaction.

Pivot Virtual Rounding Powered by Microsoft Teams transforms the patient experience, empowering healthcare providers to serve more patients, protect healthcare professionals, and better manage resources – all while delivering exceptional care.
