IQGeo

Network Revenue Optimizer

Near-net estimating software

Network Revenue Optimizer is the revenue-driven near-net estimating solution that empowers fiber operators to maximize monetization, accelerate sales, and scale growth with intelligent, data-driven decisions.

Why Network Revenue Optimizer?

Estimate rapidly
Enable sales engineers to generate revenue-optimized quotes in seconds, accelerating sales cycles and boosting conversion rates.

Automate effortlessly
Drive digital route generation, empowering engineers to assess multiple scenarios instantly and prioritize revenue-driven expansion.
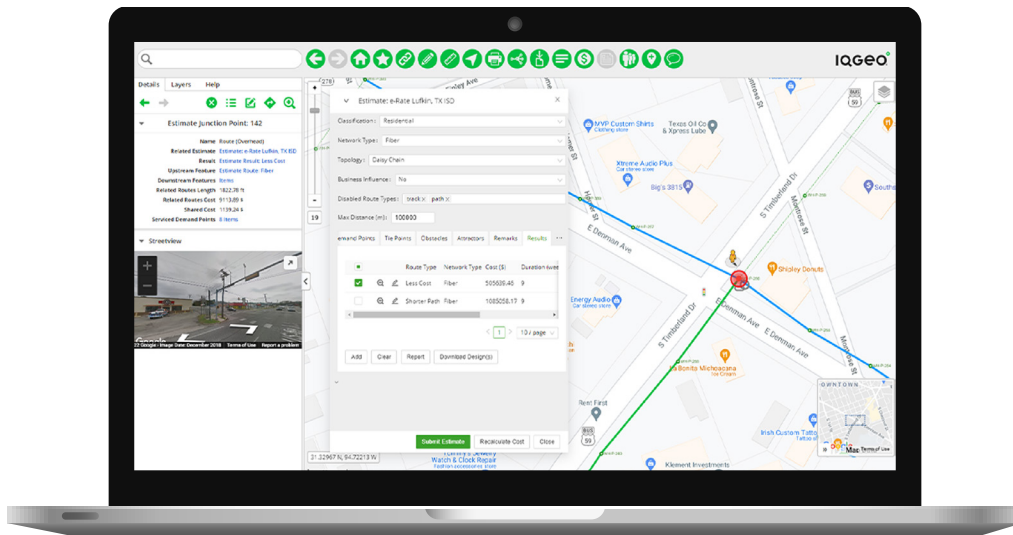

Model intelligently
Allow sales teams to visualize and compare high-value routes, balancing cost, capacity, and revenue potential for smarter expansion decisions
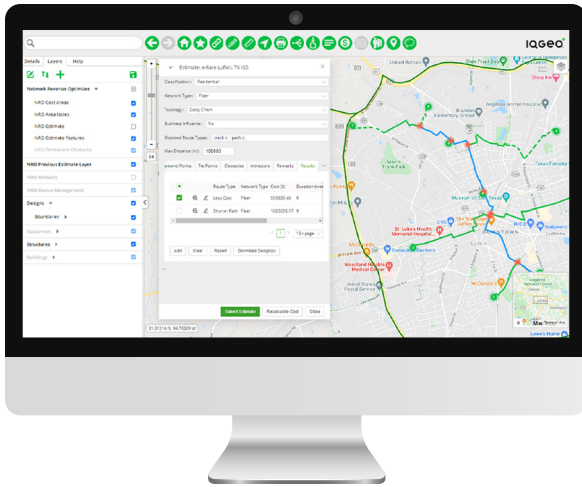

Collaborate seamlessly
Unify estimating and approvals with automated workflows, ensuring every sales decision is backed by revenue intelligence.
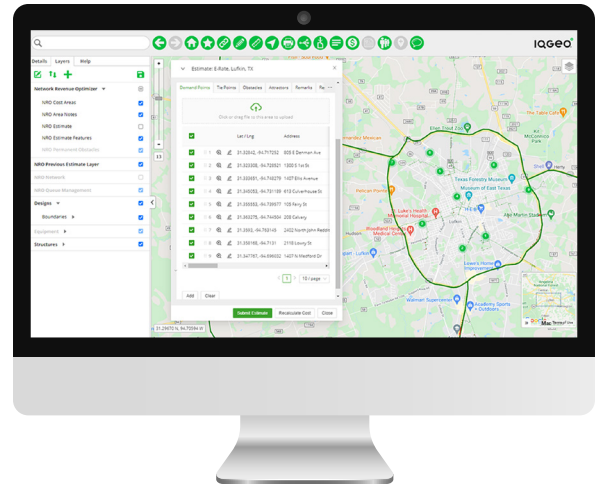

Unlock the full revenue potential of your network infrastructure

IQGeo

Automatically generate least cost and highest business potential routes to service the proposed new customer connection

Quickly and accurately estimate construction costs for a single address or bulk addresses uploaded into the system

IQGeo Integrated Network

A single platform across the lifecycle

The telecom industry's only single platform to enable operators to deploy and operate networks across the entire lifecycle, from planning and design to operations and sales.

Design > Build > Monetize > Operate

- Integration across the lifecycle
- Automated planning and estimating
- Accelerated network designs

- Accurate, efficient builds
- Maximized network revenues
- Single view of network data

With a single, shared view of network data and streamlined workflows, IQGeo gives companies the speed, efficiency and precision they need to deliver great service and stay ahead of the competition.
