FOR IMMEDIATE RELEASE

JLS Exhibits Robotic Flow Wrapper Loading System at IBIE 2019

Hygienic Talon® robotic loading system combined with flow-wrapper easily packages baked goods

YORK, Pa., July 22, 2019 – Baked good producers can easily load and package fresh or frozen products when the JLS Talon® robotic pick-and-place system is paired with a flow wrapping machine. The system can handle desserts and snacks including cupcakes, granola bars and cookies as well as frozen goods such as corn dogs, burritos and breakfast sandwiches. See the versatility of the system when the Talon and a Campbell Wrapper Revolution flow wrapping machine are integrated at the International Baking Industry Expo (IBIE) in Las Vegas on Sept. 8-11 at booth 6429.

The Talon, which features an IP69K stainless Delta robot, can load products at speeds over 100 picks per minute into a flow wrapping system. JLS' proprietary sanitary Vacuum On Board technology eliminates airline clogs, reduces air consumption by up to 50 percent and simplifies changeover, helping to keep bakery operations fast and efficient. In addition, the space-saving Talon loading system can directly mount over the product infeed of the flow wrapper to achieve a small footprint.

The Talon pick-and-place system features multiple levels of sanitary construction, making it suitable for the most challenging bakery environments. An optional open frame design eliminates enclosed spaces, helps prevent product and liquids from pooling, and ensures all surfaces on the machine frame can be easily cleaned, including all uprights, cross members and guard doors.

Visit JLS Automation and see the Talon flow wrapper loading system at booth 6429 at IBIE Sept. 8-11, 2019 at the Las Vegas Convention Center.

###

About JLS Automation

JLS Automation supplies simple, easy-to-use hygienic robotic packaging solutions for the food industry that solve complex packaging challenges. Designed for sanitary environments, JLS custom vision-guided primary and secondary robotic packaging systems are user-friendly, easy to operate, fast to start-up, and ensure both worker and food safety. The company's proprietary robotic tooling and high-speed leak detection systems have been awarded several patents. JLS
