

## SNP3 [TC] | SNP Transformation Cockpit – Advanced

### By Appointment

### Target group

- Migration Consultants
- Business Consultants
- Project Managers with technical background

### Objectives

Based on the training unit SNP2[TC], in this training in-depth knowledge on expert topics for SNP Transformation Cockpit will be shared. Besides learning how predecessors and offsets are created and used, some more advanced features of the software like predecessor objects for controlling area split and processing of condition tables (like A-tables) will be introduced to the participants.

### Training content

Participants will learn and use the following expert features of SNP Transformation Cockpit. Again hands-on exercises are included that participants will be able to do on a training system.

- Backing up and re-loading records of tables
- Creating Global Selection and populating them on run time
- Creating and using own tables
- Global Events and Global Function in the rule base
- Meaning and use of Offsets
- Writing into tables different to the source tables
- Using multiple systems within one scenario
- Using Export-based Customizing Analysis
- Defining and using Predecessor Objects
- Renumbering for data import without Predecessor Objects
- Best practice
- Online certification

### Prerequisite

- SNP2[TC] is mandatorily required
- SAP application consultants with extensive knowledge of the technical implementation of at least one SAP® module
- Basic knowledge in data migration using SAP standard tools (LSMW, batch input, etc.)
- ABAP and SQL skills
