

## SNP2 [D] | SNP Data Provisioning and Masking

### By Appointment

### Target group

Partners and (new) customers of SNP DPM

### Objectives

SNP Data Provisioning & Masking enables you to effectively create relevant test data on your systems, including the essentially required feature of data anonymization. In this training, you will become familiar with all these functions and learn how to effectively use them. Beginning with possible usage scenarios to the architecture overview up to possible configurations, you'll receive an overview of the product. Subsequently, there is an introduction to the user interface by means of practical examples. After dealing with the representation of the Administration and Designer interface, tools to create your own scenarios are covered. In addition, the SNP Content will be analyzed in detail. After that, the focus will be on the subject of anonymization, before completing the training with the execution of the data transfer.

### Training content

- Data Provisioning & Masking at a glance
- Architecture overview
- Overview of the SNP Content
- SNP DPM Units
- Administration and configuration of scenarios / System maintenance
- Scenario Designer / Extend SNP Content / Create your own Content
- Anonymization
- Data transfer (via RFC)
- Transfer data via file system
- Monitoring
- Deleting target system before data transfer
- Practical exercises
- Online certification

### Prerequisite

SNP1, SAP® basic knowledge
