

SNP [DM] | SNP Dragoman

By Appointment

Target group

Partners and (new) customers of SNP Dragoman

Objectives

In this training you will learn how to handle the software and get to know all the possibilities the software offers to make your translation process as simple and effective as possible.

It is shown, step by step, how the SNP Dragoman is configured and how to create translation scenarios. The entire translation process is described directly in the system using practical examples, so that you are able to efficiently translate your own developments and master data after the training.

Training content

- Optimization of the topic of translation
- Requirements concerning translations in transformation projects
- Support in the internationalization
- Architecture of the SNP Dragoman for one system
- Architecture of the SNP Dragoman for several systems
- The translation process
