

ARZ

We had already performed three successful carve-out projects with SNP. We were impressed with SNP Transformation Backbone and used it to carry out this latest project quickly at minimal cost.

Successfully Carving Out Company Codes

About ARZ

ARZ, based in Innsbruck and Vienna and formed from the 1993 merger of RZW and VDG, has made a highly regarded name for itself as a center of competence for IT services for banks, hospitals and government agencies in Austria.

To accommodate its expanding client base – mainly in the banking sector – and the need for new products, the company has grown to nearly 520 employees. It now serves approximately 70 banks as well as Tiroler Landeskrankenhaus GmbH (the Tirol state hospital) and the state government of Tirol.

The Challenge

Hypo Alpe Adria was being carved up into three units following a change of ownership. ARZ now faced the challenge of splitting up the SAP® company codes and transferring them to two target clients. After the transfer, it had to delete the migrated data from the source system and clean up the source client.

The Solution

ARZ decided to execute this project with SNP Transformation Backbone®, the world's first standard software that automatically analyzes changes in IT systems and implements them in a standardized way. ARZ had already performed three successful carve-out projects with SNP.

After conducting an analysis and generating a blueprint, SNP conducted three test conversions over nearly five months in which it migrated all the company code data along with the workflows and items. SNP also updated the company code-related customizing in all three clients. Every step involved in splitting up the SAP company codes was completed on time without errors, allowing ARZ to start using the split up company codes in live operations immediately after the conversion.

The Advantages

- SAP company codes were transferred to two target clients
- Migrated data was deleted from the source client
- Painless, error-free go-live
- Short completion time
- Content creation in SAP SEM Banking
