Siemens Continues to Rely on SNP Software

Heidelberg, Germany, September 10, 2014 – Siemens has chosen software vendor SNP Schneider-Neureither & Partner AG to deliver its solution SNP Transformation Backbone®. By using the world’s first standard software solution for automated analysis and standardized implementation of changes in ERP systems, Siemens is now able to efficiently harmonize its IT landscape and reduce complexity.

“Siemens has been collaborating successfully with SNP for years and uses SNP’s software in many projects,” says Michael Brauer, Head of Corporate Automation at Siemens. “In more than 50 projects around the world, we have leveraged SNP Transformation Backbone to reduce complexity in our SAP landscape and optimize our IT infrastructure.”

With the deployment of SNP Transformation Backbone, Siemens intends to continue reducing project duration and IT costs. All the company’s IT departments across the globe now have the ability to implement changes in their ERP systems quickly, and effectively – with minimum downtime. Compared to traditional approaches, SNP Transformation Backbone can migrate large amounts of data sets to new IT systems within days. Thus, Siemens is now able to react faster and more flexibly to changing conditions and can adapt its IT landscape accordingly, even throughout the year.

“SNP Transformation Backbone enables users to develop their own expertise to implement transformation projects, e. g. acquisitions or carve outs, without the need for external consulting”, explains Dr. Andreas Schneider-Neureither, CEO of SNP AG. “We are excited that our long-term customer Siemens is using SNP Transformation Backbone on a global level and can now share best practices with its project teams.”

About SNP

SNP AG increases the speed with which companies can implement changes, and supports them in adapting their IT landscape more quickly and economically to changing market conditions. With its SNP Transformation Backbone®, the software company has developed the world's first standard software solution for automated analysis and standardized implementation of changes in IT systems. The transformation platform is based on the experience of the more than 2,500 projects it has completed worldwide. The company, founded in 1994, gained this experience with its software-related services for Business Landscape Transformation®.

More than 250 employees in Europe, South Africa and the USA achieved sales of € 23.5 million in 2013. SNP AG, headquartered in Heidelberg, went public in 2000 and has been listed in the Prime Standard segment of the Frankfurt Stock Exchange since August 2014.
