Press Release

New Release of Standard Software for SAP Transformations

IT Enables Business Change

SNP introduces SNP T-Bone 10.4 with extended functions

Heidelberg， 30 April 2010 – The software and consulting company SNP AG is introducing the second release of the software SNP Transformation Backbone® (SNP T-Bone), which automates SAP system transformations and supports them holistically. It is now possible to adapt SAP transformations to all business-related targets even more flexibly with SNP T-Bone 10.4. As a result, the changes in the IT architecture can become a decisive process factor for company restructurings. SNP T-Bone reduces both the project cost and the project duration up to 70 percent, while still maintaining compliance and quality at all times. The software has been certified by one of the world's four largest auditors. A quick and secure Return of Investment can therefore be ensured, which is a critical advantage for companies in the competitive global landscape. SNP T-Bone 10.4 will be presented to industry specialists for the first time at the SAPPHIRE NOW Conference, which will take place on May 16/17 to19 in Orlando/USA and in Frankfurt am Main.

"Trade and business publications have lately been mentioning internal IT as an important process factor in M&A transactions. These processes could not be optimally supported previously because there was no technology available to do so, but now - with SNP T-Bone 10.4 - we provide software that can automate IT transformation processes. We make IT a factor for successful company restructuring processes", says Dr. Andreas Schneider-Neureither, CEO of SNP AG.

SNP T-Bone 10.4 provides expanded functions for project management. In addition, the so-called SNP T-Bone Transformation Cockpit can transmute business targets into technical rules for implementing a transformation.

The new SNP T-Bone 10.4 release also furnishes a new unit for the task of consolidating different HR systems. The SNP T-Bone Unit HR Merger is already being utilized by a major client. "An internationally active, integrated materials and technology enterprise is already using the unit for projects successfully", Andreas

Schneider-Neureither reports. Any transformations involving all possible master and transaction data can be converted in the SAP Personnel Module.

About SNP

SNP is a leading provider of software and software-related-services for transformations of SAP systems required in the wake of mergers and acquisitions, splits, harmonizations, or system upgrades. For these transformations of a company's IT processes, SNP offers SNP Transformation Backbone® (SNP T-Bone), the world's first standardized software that automates and comprehensively supports transformations of SAP solutions. SNP also uses this software for its unique consulting approach, SNP Business Landscape Transformation®, which supports companies to succesfully transform IT according to business changes.

In addition to its focus on transformation, SNP offers solutions for management of IT system landscapes. With its consulting approach, SNP Business Landscape Management, SNP supports companies in optimizing the service and support processes of their SAP system landscapes.

SNP was founded in 1994 and currently employs approximately 162 employees at five locations in Germany, Austria and Switzerland. SNP serves international and national clients and has the experience of more than 1,000 successfully completed projects. In fiscal year 2009, SNP AG achieved a turnover of 20.2 million Euros. The company is listed on the General Standard of the Frankfurt Stock Exchange.
