## SNP Interface Scanner Is Certified as Powered by SAP NetWeaver®

- Following SNP Transformation Backbone® with SAP LT, Further SNP Transformation Software Is Certified by SAP

**Heidelberg, Baden-Württemberg, March 2018 — SNP Schneider-Neureither & Partner SE today announced its SNP Interface Scanner has achieved SAP certification as powered by the SAP NetWeaver® technology platform. The solution integrates with SAP NetWeaver and allows users to automatically analyze and document interfaces with minimal effort. This enables companies to gain valuable insights into their system landscape and the changes that occur over time. The software identifies and eliminates unused interfaces and connections that are no longer used, for example connections to test systems. As a result, business processes are optimized and the security and agility of IT systems enhanced.**

The SAP® Integration and Certification Center (SAP ICC) has certified that SNP Interface Scanner version 17.12 is powered by SAP NetWeaver. Solutions that are powered by SAP NetWeaver can be more quickly and easily integrated into SAP solution environments. Customers can benefit from improved interoperability with SAP applications and with the large ecosystem of solutions that run on SAP NetWeaver. Choosing an SAP-certified solution can also help reduce overall IT investment costs and risks.

“We are delighted to announce the successful achievement of our SNP Interface Scanner, now certified as powered by SAP NetWeaver,” said Dr. Andreas Schneider-Neureither, CEO of SNP SE. “The ability of SNP Interface Scanner to run on SAP NetWeaver and interoperate with other SAP NetWeaver-based solutions will prove highly beneficial to our current and future customers. It is further proof of the high performance delivered by SNP software. The certifications enable us to provide even better support for companies during data analysis and data transformation projects, in particular concerning SAP S/4HANA. At the same time, we are providing further impetus for the expansion of our software business.”

## **About SNP**

SNP helps companies transform business models and roll out new technologies. Its software and services make it easier to execute technical or commercial changes in global business applications.

Together, CrystalBridge® and SNP Transformation Backbone® with SAP® LT constitute the world's leading data transformation suite for automatically analyzing, applying and tracking changes in IT systems. They significantly improve quality while making transformation projects much faster and more cost-effective.
