

Exigence Platform for COVID-19 Situation Management

streamlining, accelerating, and optimizing

situation management in the face of the global pandemic

The COVID-19 Situation Challenge

The COVID-19 pandemic is forcing organizations all over the world to seek out effective and efficient ways to deal with a whole new set of challenges in zero time.

There are **employees** who are required to work from home, **customers** who expect business-as-usual service and support, and **shareholders** who are burdened by heightened concerns.

So, it's no surprise that the areas that are topping the corporate agenda today is how to:

COORDINATE MANAGE COMMUNICATE

with each of these stakeholders.

With teams more dispersed than ever, and with situations being more complex and frequent than ever, a virtual command and control center has never been more critical for driving situation management efficacy.

The Exigence Situation Management Platform

Exigence is a cloudified platform that can be **deployed within a few hours** and used immediately by the organization's stakeholders as a **virtual command and control center with automated orchestration**.

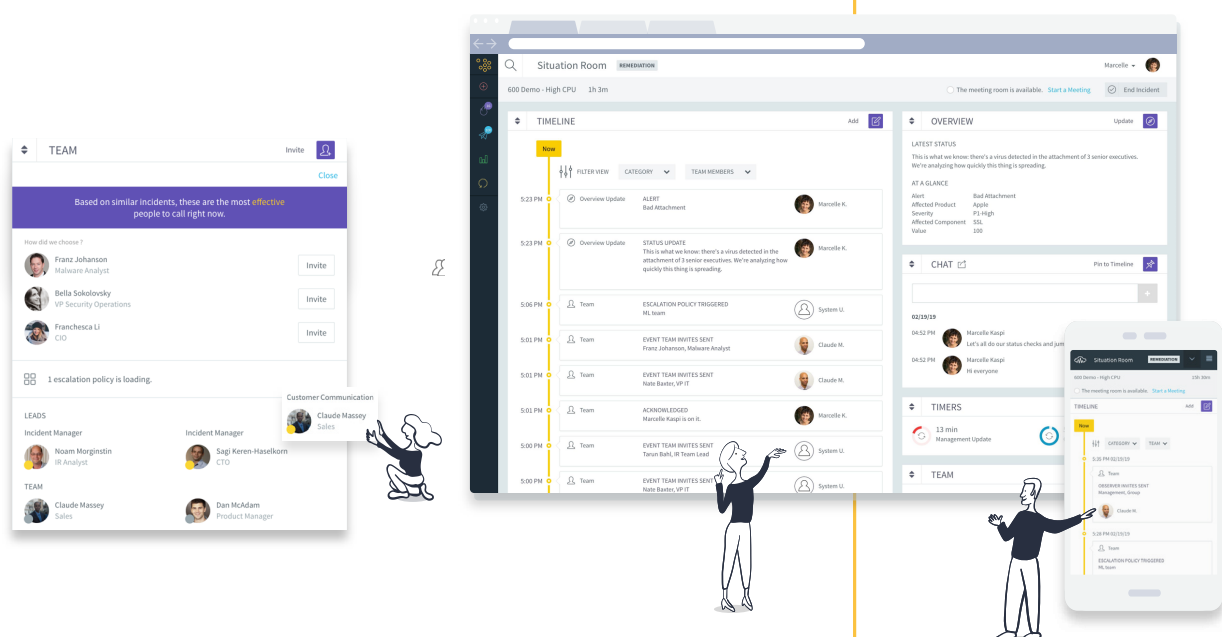

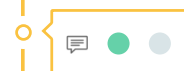

This way, even the most complex of situations being handled by even the most dispersed of teams can be managed effectively, efficiently, and immediately.

With the platform's **Exigence Situation Room**, stakeholders can leverage a centralized virtual situation room to coordinate and communicate with dispersed work-from-home employees and external stakeholders.

As a result, customer expectations can be **addressed swiftly**, shareholders can be **reassured effectively**, and messages to the media can be **aligned** – all with unprecedented clarity and speed.

"Now it takes only 1-2 minutes vs. 30-40 to get everyone aligned and on the same page, working together effectively and efficiently."

Joe Roach, Vice President of Global IT Operations & Infrastructure at McGraw-Hill

The Exigence Virtual Command & Control Center

The Exigence Situation Room serves as virtual command and control where:

- **Stakeholders come together** regardless of their physical location, to get briefed, onboarded, aligned, and updated
- Teams, whether organic, cross-organization, or external (partners, vendors, distributors, etc.) **access Exigence by any device**, including mobile phones, tablets, laptops, and desktops
- Situation management team members are **assigned to roles** clearly, quickly, and comprehensively
- Situation management and documentation is **centralized**
- **Reports and updates** are automatically sent to every stakeholder, including management and shareholders in real time with action items and/or updates about progress

Trusted by

A special offer in support of COVID-19 challenges
