

FOR NONPROFITS & CHARITIES

Multi-Factor Authentication (MFA) Jumpstart Program

MFA provides a second layer of security to your Office 365 environment. With MFA, you can extend your Office 365 security beyond the password, and compel a challenge/response user authentication to occur.

The MFA Jumpstart Program will help your nonprofit improve your security by enabling MFA within your Office 365 environment on a pilot basis. This pilot will help you determine how best to implement MFA across your organization.

WHAT IS MFA?

MFA increases the security of your user logins for Cloud services above and beyond just a password. When signing into an Office 365 environment (for example, SharePoint), your users will put in their password, then have to acknowledge a phone call, text message, or an app notification on their smartphone to be able to sign in. Only when this second authentication has been satisfied can your users access your environment.

DELIVERABLES & ACTIVITIES

- Conduct a discussion on MFA for Office 365 and how it can be implemented to help improve security posture
- Setup MFA for Office 365
- Provide end-user configuration documentation for support staff and end-users
- Conduct a pilot implementation for up to 20 users

At the end of the pilot, you will have the required knowledge to implement MFA for your remaining users.
