

ProServeIT's Power BI Implementation and Build-Out

Have you explored your options with ProServeIT's Power BI Discovery Session and are now looking for ways to implement Power BI in your organization? Do you want to get the most from your data with visually-appealing, relevant reports? Our Power BI Implementation and Build-Out can help you get what you need!

What is a Power BI Implementation & Build-Out?

As a follow on to ProServeIT's Power BI Discovery Session, our Power BI Implementation and Build-Out will continue to help your organization move to a better data and analytics reporting system. Using the list of recommendations from the Discovery Session on where to start first, ProServeIT will help you to extract, transform, and load your data for use in Power BI. Once you have access to your data, we'll design, or help you design reports and dashboards for both web and mobile consumption.

Deliverables & Activities

From this Power BI Implementation & Build-Out, you'll work with our data & analytics experts and receive:

- A full Power BI Report build-out with metrics and KPIs that were determined during the discovery phase.
- Access to reports on web or mobile devices.
- An as-built document that outlines everything from the discovery phase, report sharing strategies, and formulas and calculations used during implementation.
