

ProServeIT's Cybersecurity Assessment

ProServeIT's Cybersecurity Assessment is designed to help you assess your organization's overall security posture and learn the first steps to take in protecting your organization from cyberattacks. Through this process, you'll understand the challenges that are associated with operating in a digital era, and will get an introductory, "101" overview of your environment.

At the end of this Cybersecurity Assessment & Workshop, ProServeIT's experts will have shown you a clear plan of what your priorities should be, and which security tools are available that best fit both your immediate and future requirements. We'll also help you develop an education plan for your employees, so that they will understand the importance of these new cybersecurity initiatives you'll be putting in place.

Deliverables & Activities

From ProServeIT Corporation's Cybersecurity Assessment & Workshop, our experts will:

- Provide a training session about cybersecurity and the reality of the threats facing businesses today.
- Conduct a review of the organization's work habits and norms, with a security focus. Review of your Cloud environment (such as Office 365).
- Collect IT infrastructure information and complete a detailed data analysis of the information collected.
- Provide a clear understanding of identified vulnerabilities.
- Create a findings report, with Must Do, Should Do, and Could Do categories, to help you understand what your top priorities should be.

Cybersecurity Assessment Benefits:

Identify elements in your IT environment which might make it prone to rapidly spreading and potentially destructive cyberattacks

Receive guidance and recommendations, and learn best practices on how to successfully mitigate security threats.

Get a prioritized and actionable roadmap containing proposed actions based on discovered gaps.
