

# voice

Your customers' needs.  
Your business objectives.  
**One intelligent conversation.**

The Voice cloud-based communications platform enables users to build multilingual conversational interfaces with no code in a SaaS platform with instant deployment everywhere. Using Voice's patented technology, you can build and deploy systems that meet your business needs, regardless of complexity. Securely hosted in Microsoft Azure or Microsoft Azure Gov., based on your business needs.

## The No-Code Power of Voice

### Voice, Mobile, Text, Web

Mass inbound conversations simultaneously occur with the methods people want, allowing them to switch methods when they want.

### Real-Time Intelligent Interaction

Leveraged for service delivery at any point during or after the conversation; actions such as sending text messages, emailing, call transfers, file delivery, for the primary or a third party.

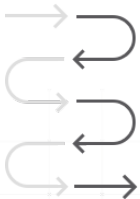

### Configured to Your Needs

Platforms are molded to meet the needs of your unique processes and requirements.

### Information Sorting

Conversation filtering to immediately notify you of the important while letting you deal with the routine when you have time.

### Intelligent Dialogue

Two-way conversations through technology that can listen, discern, and respond intelligently.

### Completed Conversations

Conversations that complete requests and document outcomes.

## National Platforms Built on Voice

Innovative, cloud-based technology to cut non-emergency response times to zero
