Cut Costs with Materials Management

Whether your team has inventory warehouses or a fleet of stocked trucks, managing your supplies literally involves a lot of moving parts!

Corrigo makes it easy to manage your inventory. No matter if you want to maintain your existing inventory management systems or you want to bring it all into Corrigo, you can enjoy easy shipment tracking, automatic restocking, and much more – it's just scan, beep, ready.

Your custom parts catalogs and inventory can be directly loaded into Corrigo, ensuring monitored stock levels and automatic reorders. No more worrying about duplicate orders or running low on supplies – it's all in the app. As soon as parts are added to a work order, they are deducted from your stock. The system is compatible with barcodes and QR codes, so receiving new inventory is a snap.

Benefits of Materials Management

With Corrigo's Materials Management module:

- **Automate your ordering process** – automatically reorder all understocked products to maintain par levels set by you and your technicians
- **Consolidate orders** – reorder supplies all at once to optimize pricing discounts
- **Track orders** – checking the status of your orders allows you to know when they'll arrive
- **Receive shipments** – technicians can easily review received orders and add items into their inventory using the Corrigo mobile app
- **View Historical Trends** – capture the costs of parts and materials over time to better understand your spend over time by part, store, etc.

Streamline your processes and improve your resource tracking with real-time and historical information about facilities processes. With Corrigo, you can spend less time managing orders as you curb unnecessary administrative and maintenance spend.

"We love inventory… well, no one loves inventory, but we love the way Corrigo manages inventory!"
- Alan Lovelace, RPM Pizza
