

DESTINY CONNECT

PeopleSoft Campus Solutions® Connector

Powered by SnapLogic®

Exchange data in real-time between Destiny One and PeopleSoft Campus Solutions

About

The Destiny Connect PeopleSoft Campus Solutions Connector leverages SnapLogic, the industry leading integration-provider-as-a-service (iPaaS), to provide out-of-the-box integration pipelines to exchange data in real-time between Destiny One and PeopleSoft. This is often needed when the main campus SIS is the system of record for credit classes, sections and student records. The connector ensures that data stays synchronized across the systems.

Benefits

The SnapLogic iPaaS solution benefits Destiny Solutions' customers in the following ways:

- Reduces the effort associated with creating new integrations and supporting existing integrations.
- Provides an easy-to-configure GUI tool to modify integration templates including business logic and object mappings between the source and destination systems, so school IT staff can make changes to integration logic without having to contact Destiny Solutions.
- Provides easy to configure alerts and monitoring tools for integration events.

Connector Details

The connector provides batch and real-time, two-way integration for curriculum, student, enrollment, and transactional events, such as:

- Credit-based curriculum (including course and section) creates and updates.
- Credit student account provisioning
- Credit student profile updates
- Enrollments into credit bearing course sections
- Enrollment eligibility and capacity checks for credit bearing course sections
- Payment and refund notifications for credit-based transactions
- Drops of credit bearing courses and certificates

Availability

This connector is separately licensable and includes administrator access to a dedicated cloud-based SnapLogic Organization for configuration and monitoring. Student Information System licenses must be purchased from applicable vendors. A professional services engagement may be required to add events or modify integration templates. Available in late 2018.
