

IT Health Check Assessment

Comprehensive Enterprise Systems Health Assessment

ennVee's health check services safeguard the longevity of your Oracle ERP investments, while ensuring all components are in place before expanding your Oracle footprint. We take a holistic approach to develop a strategy to extract the maximum ROI from your Oracle E-Business Suite investment. Our process rapidly delivers value to your organization and is scalable down to a single business function. Our proven methodology provides a supplementary analysis that you might not have previously considered.

Focus Areas for Review

Business Expectation

Ensuring expected business benefits are achieved and ROI is materialized. This phase includes an executive-level review of project goals and objectives.

Deliverables:

Executive summary (findings and recommendations)

Business Processes

Efficient business processes are central to operational excellence and establish the foundation for any system implementation. During this phase, we review and validate current state business requirements.

Deliverables:

Fit/Gap Analysis

Application Configuration

Optimal configuration ensures applications continue to support business processes. During this phase, we review and validate application configurations.

Deliverables:

Fit/Gap Analysis

Business Benefits

- Better alignment of business strategy and enabling technologies
- Streamlined end-to-end business processes
- Optimized application configurations
- Increased end-user satisfaction and confidence
- Baseline for appropriate configuration management
- Optimized Oracle applications licensing and support requirements

Technical Infrastructure

Technical infrastructure is the foundation supporting applications and must be designed to meet the application's requirements for superior performance. Key activities include the review and validation of technical infrastructure, and evaluation of diagnostic scripts.

Deliverables:

Technical infrastructure recommendations

Organizational Alignment & Training

This ensures organizational roles are aligned with business processes and employees are adequately prepared. Key activities include facilitating end user discovery sessions.

Deliverables:

Staffing recommendations
Training needs assessment

Regulatory Compliance

Efficiently meet regulatory requirements to reduce cost and allow management to focus on core business. This phase includes a review of compliance goals and objectives.

Deliverables:

Impact analysis and recommendations
