

# Oracle MSCA Services

## Consulting Services for Oracle Mobile Supply Chain Applications

ennVee provides functional and technical support for Oracle Mobile Supply Chain Applications (MSCA), as well as the implementation of new mobile device functionalities. Our deep experience within Oracle EBS SCM has helped manufacturers implement mobile supply chain applications that deliver optimal results.

### Improve inventory and accuracy reduce data entry errors with bar code scanning

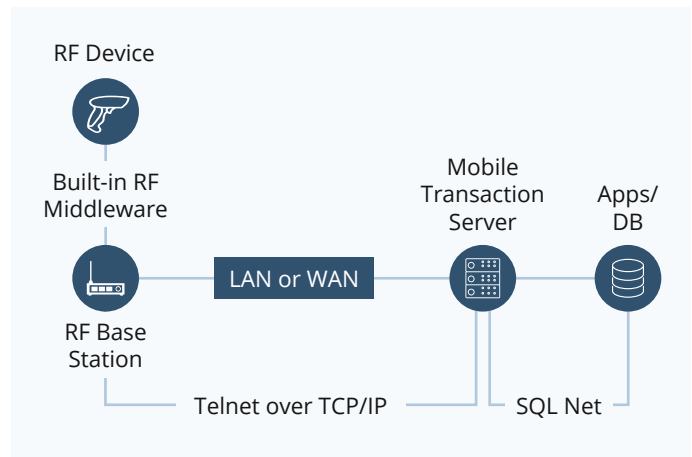

Using bar code scanning to record transaction data instead of manual data entry improves data accuracy and reduces data entry time. Mobile devices boost productivity via reduced data entry efforts and data capture activities, streamline user time-motion efforts, and enable process automation, to increase throughput and decrease cycle times.

### Reduce latency through mobile device utilization

Mobile devices allow users to enter transactions and perform queries in real-time at the point of use. Transaction validation takes place online, identifying invalid data immediately. Real-time inventory information improves quality of supply chain collaboration, enables more accurate guaranteeing of customer orders, and optimizes manufacturing and warehouse scheduling of activities and resources. Users have access to current and accurate information for resolution of exceptions.

### Automate mobile user operation

This is performed using hand held radio frequency (RF) devices and lift truck mounted RF scanners. The usage of mobile devices results in improved data accuracy and increased mobility and convenience thereby streamlining movement and reducing human errors.

### Improve transaction accuracy with real-time data validation

Inventory accuracy is improved two-fold through the reduction in data entry errors as well as the capability to identify inventory inaccuracies faster. Inventory accuracy techniques such as cycle counting are more efficient when performed with real-time information. The benefits of improved inventory accuracy include improved customer satisfaction through higher fill rates and guaranteed delivery, and improved supply chain planning to optimize production and distribution plans.
