

NetSuite Admin Services

Concise administration and user management is crucial and ensures that users are assigned the proper access to sensitive information and applications. ennVee has built a strong data security and identity management practice around Oracle Access Management and E-Business Suite. We have extended these best practices for NetSuite application setups, configurations, security, data management, performance, and maintenance.

Our Expertise

- User Creation & Management
- Custom Role Creation & Modification
- Application Setup
- Data Import & Data Integrity Assurance
- NetSuite Expansion via SuiteCloud
