npm Enterprise
powerful collaboration and protection

A hosted private registry with exclusive security features. Empower teams to build applications quickly and safely.

With **npm Enterprise**, developer teams can take advantage of the frictionless collaboration and reusable code in the world's largest registry of open-source JavaScript packages—while still meeting the unique security requirements of the enterprise.
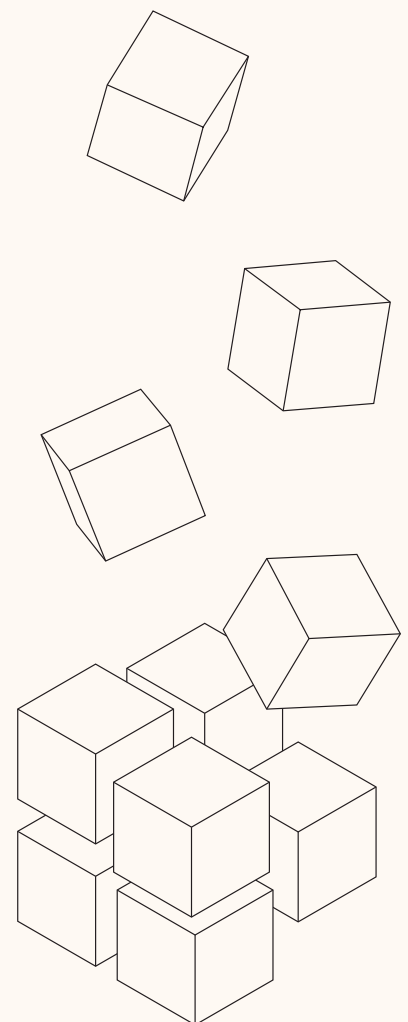

Frictionless
• find and reuse over 750,000 packages of JavaScript code
• finish projects faster with code discovery and reuse within teams
• integrate the npm workflow into existing single-sign-on, continuous integration, and deployment systems

Secure
• control access to proprietary code in a single-tenancy hosted private registry
• develop safer applications by automatically identifying vulnerable code dependencies
• analyze complex dependency trees and automatically fix insecure code
